Basic and clinical researches to establish the novel theories and mechanisms are requested for young pharmaceutical researchers. Moreover, clinical dry researches to anticipate the clinical manifestation are required for future pharmacist. However, it is very hard to conduct both basic and clinical dry researches in the same laboratory. Indeed, the basic and clinical research conferences are usually separated and there are no opportunities to discuss in diverse basic and clinical problems between future scientists and pharmacist candidates. Therefore, it is important to make an opportunity to exchange information of basic and clinical dry researches. The opportunity is extremely important for candidates of scientist and pharmacist in pharmaceutical sciences. In particular, pharmaceutical students must be stimulated to get novel idea by touching various clinical problems. By the symposium, both candidates of scientists and pharmacists can obtain novel idea by not only wet research but also clinical dry research. This symposium also give chance to obtain the research mind in future pharmacists.
