<sup>1</sup>Ina olive pharmacy

---

How to have that in a pharmacy for a patient is asked about. The Ministry of Health, Labour and Welfare released “Pharmacy vision for patients” in October, 2015 as a guideline. “Family pharmacy” but as the basic function I should have. (1) And taking information is grasped continually in one. (2) 24 hour support and treatment at home. (3) I cooperate with a medical agency. A match to “family pharmacist” is in progress based on that. So work for the more attentive pharmacist such as advice to generic drug change and counseling of a self-medication is desired as “family pharmacist”.

It's as well as pharmacist's reform of sense in a site, but to advance these business a female pharmacist in forties tends to work from work environment and 30 which makes a home in particular, and I think it's necessary to be changing to the workplace where you can have something such as “pride” and “done delight” as a pharmacist truly. The thing the lady charged with more roles by domesticities, childbearing, child care and nursing keeps doing in the various restrictions is never an easy thing, but though I work as a part-time worker, I think when planning for reform of sense, the treatment and the environmental improvement of the female pharmacist who becomes the big fighting power of the pharmacy are also important. I think a match is possible by one of the plan most from the special quality of the workplace as a pharmacy, and there are “equal pay for equal work” as something effective. I'd like to argue the directionality in this symposium.
